

SECURITY: SPECIAL INTEREST GROUP

Craig is currently the Head of School and a Professor (Digital Forensics) within the School of Computer and Security Science.

He has 20 years experience in the IT Industry and consults to industry on network security and digital forensics issues. Craig has over 50 publications to his name on security related topics.

VoIP something old something new

Speaker: Professor Craig Valli
Date: Thursday 11 February 2010
Time: 5.30 - 6.30pm
Venue: ECU Mt Lawley Campus, Building 17 Room 203

Over 30 years ago the “holy grail of hackers” was the compromise and utilisation of PABX systems to enable free phone calls for voice and of course data at that stage. In response to this phenomenon PABX systems became increasingly secure and less able to be compromised. Now some 30 years on we now have home ADSL accounts with VoIP devices used for telephony, we appear to have learned little. There has been an attendant increase in network scanning activity that looks for available or VoIP systems. This talk will look at some of the tools and techniques being used by attackers to compromise these systems. The talk will also explore motivations for the attacks.

SECAU
Securing Australia's Future

This Security Forum is organised by the SECAU Security Research Centre.
The forums are open to industry, public and private persons with an interest in the security domain.

Please RSVP to Lisa McCormack on 6304 5176 or email l.mccormack@ecu.edu.au
